Sungrow sg5k-d installation manual. Sungrow sh5k-20 manual. Sungrow sh5k-30 installation manual.

lanss tsus tsum tsum tsum tsum tsum. Noitacilppa dirg-ffo eht rof Metasys nt ab tsum dirg yiltititit eht metsys dirg-ffo 2.2 .Delbasid Eb liw Edom Deznitpo Fo Noitcncnof od eht ;evitceffended eht as the power flow shown on the main screen. See add the existing system to establish the nominal power of the existing photovoltaic inverter. The exit power of the existing photovoltaic inverter should be taken into account for the export power configuration. For detailed configurations, see configuration of the EPS function (w) = ~ Execute: 37 1120 3 Description of the function 3.1 Protection of the security function The protective functions are integrated in the investor, including the protection of the short circuit, the surveillance of insulation resistance of the base, protection of residual current, anti-anti-anti-protection of the island, survival of CC / protection against the current current, etc. Earth failure alarm The investor has integrated a dry earth failure contact (relay) for the local alarm. The outer alarm must be fed by the quadra. The additional equipment required is an indicator of light and/or a bell. The recommended cross -sectional section of the cable is 1 mm 2. If an earth failure occurs, the dry do2 contact will ignite the external alarm; The timbre within the investor will also emit a beep; and the Ethernet communication port can be used for remote alarm. 3.2 Conversion and Energy Administration The inverter converts the CC feeding of the photovoltaic chains or the batterous to the CA feeding, which fits the requirements of the network. It also transmits the feeding of CC from the PV panel to the battery. With the integrated bidirectional converter inside, the inverter can load or download the battery. Two chain MPP trackers can be used to maximize the power of photovoltaic chains with different orientations, inclinations or structures of módulos. 1221 User Manual 3 Network Description olud³Ãm olud³Ãm le y etneibma arutarepmet al adiulcni(arutarepmeerboS :alucÃrdauc ed oÁvne :nos rosrevni led aÁgrene ed n³Ãiccuder al nereiuqer euq senoicautis saL .socilb⁹Áp soicivres ed alucÃrdauc al ed sotisiuqer sol etnaidem esravitca edeup n©Ãibmat n³Ãiccuder ed n³Ãicnuf al .s¡ÃmedA .selaicnetop sallaf sal o agracerbos al ed rosrevni la regetorp ed amrof anu se aicnetop ed n³Ãiccuder al sub-voltage; export power limit fixing; and power factor. Dispatch Grid Adjust the output power according to remote programming instructions and the investor works with the energy spill. Excessive temperature derivation A high ambient temperature or poor ventilation will lead to an inverter's energy spill. When the internal temperature or the temperature of the module exceeds the upper limit, the investor will reduce the power until the temperature falls within the permissible range. Draw me under tension When the voltage of the network is too low, the investor will reduce the output power to ensure that the output current is within the permissible range, as calculated by the following equation. When Vmin was carried out V, it was made 230 V, P = Pn (rejilla V / 230 V) Referring to Volt-watt Response for over-voltage curve. The following figure shows the low voltage deceleration curve. 1322 3 Function Description User manual P n Normal work area V min 230V Fig. 3-1 Grid Low Voltage Derating Export Power Limit Derating When the meter detects that the export power is greater than the limit value in the LCD, the inverter will reduce the output power within the specified range. Power Factor When the PF power factor selected1.0, the investor will reduce the output power within a specified range. The following figure shows the power factor that spills the curve. P n PF derating 0.8P n Power factor Fig. 3-2 Power Factor that melts external demand Inverter provides a terminal block to connect to a demand response device (DRED). DRED asserts modes of response to demand (DRMs). The inverter detects and initiates an answer to all the demand response commands supported within the 2s. For connections, see 12.1 ModesResponse to demand. The following table lists the DRM supported by the investor. 1423 User Manual 3 Function Description Tab. 3-1 Demand response modes (DRMS) Mode Explanation DRM0 The investor is in the state state al odnauC(:)gnigrahC(ttaw-tloV oirausu ed launaM n³ÃicpircseD n³ÃicnuF 3 4251 .der al ed sejatlov sol a atseupser ne ¡Ãrairav retrevni aicnetop ed adartne o adilas aL .alucÃrdauc ed aicnerefer ed sejatlov ortauc noc atseupser ed avruc al enifeD :ttaw-tloV .esnopseR rewoP evitcA 3.21 etlusnoc ,n³Ãicamrofni s¡Ãm renetbo araP .DCL ⁹Ãnem led s©Ãvart a rarugifnoc nedeup es euq ,aicnetop ed dadilac ed atseupser ed sodom sod etimda retrevni lE esnopseR rewoP evitcA der ed ejatlov la atseupser ne aÃrav rosrevni led avitcaer aicnetop ed adilas aL .:)u(Q .retrevni led adilas ed aicnetop al a atseupser ne aÃrav retrevni edilas al ed FP lE :)p(P .ojif avitcaer aicnetop ed odoM :tQ .ojif aicnetop ed rotcaf ed odoM :FP .ovitcaeR redoP ed n³ÃicalugeR 2.21 etlusnoc ,sellated s¡Ãm araP .DCL ⁹Ãnem led s©Ãvart a sodatilibahsed o sodatilibah res nedeup otneimanoicnuf ed sodom sosrevid sotsE .der al a etropxe ranoicroporp ed nif le noc avitcaer aicnetop ed n³Ãicaluger ed sodom ne rarepo ed zapac es rosrevni lE 8MRD â 7MRD ¥áã 6MRD μ½Ð 5MRD 4MRD ¥áã 3MRD ¥áã 2MRD â 1MRD redrO ytiroirP noitalugeR rewoP evitcaeR MRD 5MRD 4MRD 1MRD sodom selpitl⁹ÃM .MRD selpitl⁹Ãm a atseupser ne dadiroirp ed nedro le artseum es n³Ãicaunitnoc A .zev al a MRD nu ed s¡Ãm ramrifa edeup DERD lE .sovitca MRD sorto ed senoicatimil sal a atejus orep ,lanimon aicnetop al ed %001 led se der al a arodatropxe aicnetop aL 8MRD .lanimon aicnetop al ed %57 led s¡Ãm se on der al a n³Ãicatropxe ed aicnetop aL 7MRD .lanimon aicnetop al ed % 05 led s¡Ãm se on der al a n³Ãicatropxe ed aicnetop aL 6MRD .0 se der al a n³Ãicatropxe ed aicnetop aL 5MRD .sovitca MRD sorto ed senoicatimil sal a atejus orep ,lanimon aicnetop al ed %001 led se der al ed n³Ãicatropmi ed aicnetop aL 4MRD .lanimon aicnetop al ed %57 led s¡Ãm se on der al ed n³Ãicatropmi ed aicnetop aL 3MRD .lanimon aicnetop al ed % 05 led s¡Ãm se on der al ed n³Ãicatropmi ed aicnetop aL 2MRD .0 se der al ed n³Ãicatropmi ed aicnetop aL 1MRD .agapA of the network is necessary to load the energy storage system, the import power of the network varies in response to the network voltages. the response curve is defined by the voltage voltage reference values= COS)tluafed yb(% 01 % 01 01 < cos v 03 < dyb 001 = cos)tluafed yb(% 02)b0002su(v 001 %
